**Subject:** Watercross events for 2021 Case 21-008-VA

I am writing to voice my objection to the scheduling of 3 watercross events for 2021 in Nottingham. While I don't live in Nottingham, the noise from these events can be heard all the way into Raymond; very clearly, and very very loudly. Also, the events don't just last for a short period of time, so they really ruin the whole day for anyone remotely close to the property.

Thanks,

Kam Mun

**Subject:** Kubota Trust Application

Hello,

Our names are Micheal and Jennifer Menard, we live at 166 Raymond Rd Nottingham NH 03290. I am writing in reference to The Northeast Water Cross events. We are in support of the town approving the three events each year. My family attended last years events and found it to be a family oriented and great sport to watch! We hope you grant approval of the Kubota Trust application. We as a family are looking forward to the 1st scheduled Event June 2021.

Than You,  
Michael and Jennifer Menard

Good morning Michael.

The hearing on the proposed variance is with the Zoning Board of Adjustment on May 18.  
The continuance of this case will be heard by the Planning Board on Wednesday, May 26.

Yes the Conservation Commission and Planning Board are aware that the proposed watercross site is located on an aquifer. There are regulations in place to address this. There are additional sensitive issues such as noise and potential impacts to the Pawtuckaway River, a NH Protected River, over which traffic will pass entering and leaving the site. The Commission has "voiced" these concerns with the PB.

If you wish to make your concerns heard by the ZBA and PB please direct them to the Land Use Clerk who distributes information to both boards. All of these communications are distributed to PB and ZBA board members and placed on file. Her name is JoAnna Arendarczyk and she will be cc-ed this communication.

**JoAnna:** all email communication is in the public domain. Please forward this email to the Chairs and Vice Chairs of the ZBA and PB. Thank you.

Susan

**Subject:** Potential pollution source on Aquifer protection district

Sam, Susan,

Please advise if you are aware of the proposed variance on the Nottingham Sand and gravel pit for the Water Cross events. The meeting is set for May 18th.

This property sits in the middle of the Aquifer Protection District.  
The events are on very permeable soil - sand and gravel The events and pollution over time could poison a good number of private wells.

Making a permanent home for a race track type event would make a significant risk to the water table that leads to a protected River and watershed.

Over just one weekend, 100 riders will use 250 gallons of fuel and oil.  
These two stroke engines will discharge between 15% and 25% of unused gas and oil into the water, soil and air. Over one year this amounts to an estimated 120 - 200 gallons of unspent fuel...

It only takes 1 gallon of gasoline to pollute 750,000 gallons of water.  
Please weigh in on this issue.  
Prevention is more suitable than cleanup of polluted soil.

Please DO NOT ASSUME that the DES will take care of this.  
they are like policemen, then will only come in after the damage is done.

Sincerely  
Michael St. Laurent
