Subject: Stage Road, Nottingham, NH
Re: Wetland Survey

Dear Mr. Cain:

Per your request, I visited the above-referenced site and surveyed for the presence of wetlands and poorly and very poorly drained soils. I also took note of the location of the North River and its proximity to the site.

1. US Army Corps of Engineers Interim Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region, Technical Report ERDC/EL TR-12-19 (Oct 2012).
2. Field Indicators of Hydric Soils in the United States, a Guide for Identifying and Delineating Hydric Soils, Version 7.0. United States Department of Agriculture (2010).
3. North American Digital Flora: National Wetland Plant List, Version 2.2.1 (2009).
4. Classification of Wetlands and Deepwater Habitats of the United States, USFW Manual FWS/OBS-79/31 (1979).

The site is comprised of a single family home and associated driveway. The site is generally flat and is drops quickly down to the wetlands. The site is bound by Stage Road to the west and wetlands to the east. The north river passes along the southern edge of the property. At its closest location the north river is approximately 400' feet from the existing building on site. This is well beyond the 250' shoreland reference. This reference line would be taken off of the ordinary high water mark on the river and/or the top of bank.

If you have any questions or need anything else, please let me know.

Sincerely,

Luke D. Hurley, CWS, CSS
Vice President
